## Staff heading keyword searches in Voyager

Music Cataloging at Yale [1] ? Orbis and OCLC [2]

## Note: this page was created with music cataloging in mind.

${ }^{\circ}$ Staff headings keyword searches retrieve both bibliographic and authority records.

- There are four staff headings keyword searches: staff title headings, staff name headings, staff name/title headings, and staff subject headings.
- Voyager's SysAdmin manual lists subfields indexed in a staff subject subdivision headings keyword search, but this search does not seem to be available. Subject subdivisions can be searched as part of the staff subject headings keyword search, but without retrieving subject subdivision authority records (which are available only in LCDB).
${ }^{\circ}$ The filters in the staff headings searches may be used to limit by type of heading.
${ }^{\circ}$ Truncation is allowed in all four staff headings keyword searches:

| right truncation: | left truncation: | internal truncation: | combination: |
| :--- | :--- | :--- | :--- |
| ?cello | violoncell? | viol?cello | viol?cello? |

- The boolean operator "and" is the default and does not need to be included in a search.
- Including the boolean operator "and" retrieves the same results.
${ }^{\circ}$ A search with the boolean operator "not" takes a very long time.
${ }^{\circ}$ Plus ( + ) or minus (-) signs are ignored.
${ }^{\circ}$ Words of one or two characters may be used as individual search words or in a phrase!
${ }^{\circ}$ The search takes a long time.
- To search two or more words as a phrase, enclose the words in quotation marks. Searching "violin clarinet" retrieves different results than searching "clarinet violin."
${ }^{\circ}$ A staff headings keyword search using a phrase will search across subfields in the same field.
- Searching the phrase "sonatas oboe" in a staff name/title heading keyword search will retrieve records in which "sonatas, $\ddagger \mathrm{m}$ oboe" appears.
${ }^{\circ}$ A staff headings keyword search does not search across fields.
${ }^{\circ}$ A search employing multiple words retrieves only those records in which the words appear in the same field.
${ }^{\circ}$ For example, it will not retrieve authority records in which one word appears in the 1XX field and another word appears in a 4XX field.
${ }^{\circ}$ Exception: it is possible with a staff name/title heading keyword search to retrieve a record with one search words in the 100 and another in the $245 / \ddagger a$ or $\ddagger \mathrm{b}$.
${ }^{\circ}$ Nesting with the boolean operator "or" is possible:
${ }^{\circ}$ When no other boolean operators are used, parenthesis are not necessary: allegros or adagios
${ }^{\circ}$ When other boolean operators are used, enclose the nested terms in parentheses: (carl or sebastian) bach (german or germany) music
${ }^{\circ}$ Truncation within nesting works: (german? or engl?) music
${ }^{\circ}$ The searches tend to be slower than other staff headings keyword searches.
- The boolean operator "not" may also be used, but as with any search using "not," it takes a long time. Staff name heading keyword searches
