### Hierarchy display

The hierarchy display can be expanded to show the titles linked to each of the MFHDs. Here the service copy bound-with list has been exploded. (Click on the + or - at each level to expand or compress the hierarchy display) Scrolling down further would allow us to explode the negative master bound-with list, and so on.

### Get Holdings command

When the Get Holdings command is used from the bibliographic record of the guest, a **Select or add holdings records** dialog window pointing to the 3 MFHD IDs of the host record will display. If the guest had preexisting MFHDs, these would be suppressed but displayed also in the dialog box, so the **Select or add holdings records** dialog box could display 3 locations representing the host record and 3 suppressed locations representing the guest. In this example, the guest MFHDs were never created.
