Data Vis with Tableau Workshop

September 15, 2017

Workshop: Data Visualization with Tableau

September 15 from 1:30pm-3:30pm in the Center for Science and Social Science Information (KBT C27)

This workshop will familiarize you with key issues in data visualization. In addition to covering the fundamental principles behind effective visualizations, we will also touch on common pitfalls that result in confusing or misleading graphics. During the workshop, participants will gain hands-on experience using Tableau — interactive, data visualization software — to produce dynamic, compelling visualizations for all kinds of data.

Space for the workshop is limited. To register, please visit the YUL Instruction Calendar [1]. Registration is open to all Yale students, faculty, and staff.

Instructors: Catherine DeRose (DHLab), Joshua Dull (DSS), Sarah Tudesco (YUL)
