Discover Library Resources with Quicksearch Beta

June 10, 2015

The Yale University Library is delighted to introduce *Quicksearch* [1] – an online tool that unites several search services under one discovery interface. Quicksearch was built in collaboration with other university libraries using an open source system called *Blacklight.*

The services initially targeted for this new discovery interface include:

- the main Library catalog ([2]Orbis [2]) [2]
- the Law Library catalog (Morris) [3]
- licensed e-resources (Articles+) [4]

Quicksearch, now in public beta, will continue to be improved with additional functionality in the fall. It will move into full-scale production in January, 2016.

If you have **questions, comments, or other feedback** on any aspect of the *Quicksearch* project, please click here [5] to share them with the project team. Latest updates can be found on our project blog. [6]
