

Shedding Light on the Dark Universe

April 7, 2017

Look at birth on a cosmic scale through the research of two Yale Astronomy labs, from simulations of the young universe to the formation of stars in our galaxy. Shedding Light on the Dark Universe, the new media exhibit at the Center for Science and Social Science Information (CSSSI), explores how numerical simulations and high performance computing can help illuminate the structure of the universe. The exhibit runs through October 6 in the CSSSI 24-hour space on the concourse level of the Kline Biology Tower (219 Prospect Street).
