Faculty, students and staff are invited to a presentation on the upcoming renovation of the Anne T. and Robert M.
Bass Library on Wednesday, Jan. 23, from 3:30 to 5 p.m., in the Sterling Memorial Library Lecture Hall. Project
architects will show designs for the space, and librarians will share a proposal for the content, organization and
management of the library’s post-renovation collection.

“The proposed design and collections have been based on extensive research into the habits and preferences of
Bass library users,” said Assessment Librarian Sarah Tudesco, chair of the planning committee. “As we approach
key decision points, we are excited to share our plans with faculty, students and staff for any additional comments
and questions.”

The goal of the project is to expand study space in Bass, a popular destination for Yale College students. Since two
new colleges opened in August 2017, the number of undergraduates at Yale has grown, for a total increase of 800
students by fall 2019.

On Jan. 23, Providence-based DBVW Architects will show a proposed design that will increase the library’s current
365 seats by at least 20 percent and reconfigure the layout to include more individual study spaces. Shelving will
be reduced to make room for seating and to let natural light from the courtyards reach more of the upper level.

The Bass collection currently holds about 150,000 items, including scholarly works related to the undergraduate

curriculum, English-language literature, graphic novels, DVDs and audiobooks. The renovation will reduce the
collection to about 40 percent of its current size. DVDs and audiobooks—formats with declining use—will be
integrated into university library collections as appropriate. Books removed from Bass will be integrated into the
collection held in Sterling Memorial Library’s stack tower.

Going forward, the collection in Bass will be developed, arranged and presented with the goal of encouraging
students to explore and engage with the materials. The upper level will showcase specialized collections, such as
graphic novels, and themed displays of books related to a current topic or issue. Faculty, students, and librarians
will be invited to develop sub-collections related to a specific course, subject area or intellectual concept, with
related events and programming. The lower level will house a dynamic, high-use collection of newer books.

“A library collection is essentially a conversation between the library and its users,” Tudesco said. “We are excited
about the opportunities to partner with faculty and students to make the Bass collection more dynamic and
interactive.”

Last year, before design work began, the library commissioned a study [1] of how the campus community uses and
perceives Bass. The study revealed that students choose Bass primarily to work on class assignments rather than
to access the collection. While valuing the communal study experience at Bass, students showed a strong
preference for carrels and other individual study spaces that limit visual distraction. Faculty responses to the study,
on the other hand, focused on the prospect of changing the collection, expressing concern that students would
have fewer opportunities to make serendipitous discoveries while browsing in the stacks.

“We have worked hard to address the interests and issues raised by the research,” Tudesco said. “We are eager
to present the proposals to the campus community on Jan. 23 and receive as much feedback as possible.”

Construction is scheduled to begin after Commencement with a goal of finishing by year end. Planning is now
under way for the temporary relocation of course reserves, equipment borrowing, scan-and-deliver and other Bass
services during construction. Ongoing project updates will be posted at guides.library.yale.edu/bass2019 [2].

Questions about the Jan. 23 meeting may be addressed to sarah.tudesco@yale.edu [3].
